World Wide Help Server Side Mod (WWH SSM) is a public AI Bot Spawner list containing over 300 AI Bot Spawners and pre-configured AI Bots. It makes making co-ops fast and easy because all you have to do is click the 'Make' button to create your AI Bots, then all you have to worry about is the scripts and such to make your co-op unique.

[Notice]: 2.1 was released because 2.0 had a critical bug that'd crash servers running BIATCH. View Update info in readme.txt for more information.
However, it is not wise to run BIATCH if you're doing heavy modifications such as this, it tends to crash for us at WWH.
