I am making a server side mod for a friend of mine and he wants his mod that way that players spawn a random character, like st0rm co-op has on some maps. Like you spawn, you go through a script zone and you get a random character like a flamer, engie, soldier, rocket trooper etc. I have been searching the scripts, but I can't find it. Is there anyone that has recently used this script and can tell me what it is?
