Well, most of you know that some servers do display the new WOL ladder ranks, but I never liked how the system was not put fully into place yet, and things like the rank at the main WOL menu didn't work etc, it was only limited to being in those servers. TO fix this, follow these steps:

1)Head to WINDOWS\SYSTEM32\drivers\etc
2)Open the "hosts" file with notepad
3)add 70.84.132.90 renchat2.westwood.com
4)save

Now everytime you open renegade, your deaths/kills and overall rank will be shown client side
