The newest Renguard-version gives some people the following problem. You open Renguard, click 'Renegade' and go on WOL (xwis). After a minute or less, Renguard closes Renegade though, stating "Unauthorized Renegade instance closed".

A solution that worked for some of us:

- start Renguard, then quit Renguard when the Renguard message of the day has loaded. Then start Renguard again. (basically u load Renguard twice);
- when Renguard is reloaded, you wait about 20 seconds before clicking 'renegade'. This should allow Renguard to scan all your files before loading Renegade.

This is just a workaround that seems to work for multiple players. I can't guarantee it works for all (hence it's not in the FAQ either).
