AlienWorkShop wrote on Wed, 29 August 2007 03:40 That still wont solve the problem of his renguard finding invalid files just by using game2.exe, what if he wants to play Multiplayer, using game2.exe will either get him forcerg off the server, or bugged to death by messages

Can't handle two concepts at one time or something? If he wants to just test models, he can run game2.exe. There will be no problems with RenGuard because it won't be open.

If he wants to play online without the models, he can remove them and open up game.exe. It's simple.
