ParasolKirby wrote on Wed, 29 August 2007 05:08Are you saying that someone in our clan is supposed to download the server program? Will that compy be able to handle being a Vent server AND play Renegade?

Correct, it's best to run your own server.

Ventrilo does not use lots of CPU, its biggest cost would be the bandwidth used, and if you can manage that depends on the server you have.

You could piggyback on someone elses ventrilo server, but you lose all control over how it's run + who connects.
