This isnt PC vs PS2 it's ps2 vs ps2, because a standard ps2 cant do any of this, and not everyone wants to use a media center PC on their TV, so this is like a quickfix rather than buying an appletv or slingbox, if i remember there was a hack to make them play avi files, but heck a machine older can do it at full speed

Yesterday i loaded up my external hard drive with a anime i never finished, so i decided to finish it, lucky me, I forgot and formatted my HDD to ntfs and not fat32! now my ps2 doesnt recognize it and i need to reformat again, i checked my usb thumb drive and it's fat32, so I'm thinking ps2's dont like ntfs formats.
