Shot in the dark, but am I the only one who thinks the screenshot is questionably odd? Not defending anyone, as I don't know this StoneCold, but it is possible to use GSA to copy someone's name. They say the IPs match, but where's the proof? Where (who) did the screenshot com from? Why is the website crossed out? There's too many unanswered questions. It's just "heres a screenshot of cheats and the name matches StoneCold's, banned". By the way, that also appears to be a sniper server (TSUGaming maybe from a few of the players' names I recognized there a few days back).
