I was using ren and RG for some time, but 2 days ago, i got a problem. somehow it kept saying i got the wrong version, with every server. i didnt added or changed a thing, nor im banned etc. so i removed ren and clean install, without stuff --> Online possible, so i dled rg --> but as my RG somehow doesnt even download cp1 nor cp2, i had to manually update them threw the sticky. So i did. After that i dled scripts 2.9.2. Guess what, i now again get the version mismatch thing, and i think cos of outdated RG updates?

And wow, i had to wait 30 mins, then this site finally loaded after typing the message.. whats up with this?
