AoBfrost wrote on Wed, 05 September 2007 11:16No, you dont need to change the ports in server.ini, I mean you change the port in 192.168.1.1 in the forwarding area, you dont forward your firewalls ports, you forward your router or switch by typing in 192.168.1.1 then clicking the forwarding range, and then savign it, all routers or switches allow this. If you are hit by a password, then type admin as username and password, if that doesnt work, just try admin as password.
