Xpack not dead

RenAlert & Reborn's engines will be based off of the Dead6 engine... if that tells you anything that we have done.

just because i haven't smapped the forums with bs pics of this, and "hey, check this out" links... doesn't mean i am not working on it very hard.

currently, yes, i am playing planetside, big fucking deal, get over it, i like the gameplay. i am making Dead6 to have better gameplay then Renegade so i might not mind booting it up and hopping on a server to play everyonce in a while, currently, i have played Renegade 3 times in about 3 months. (not including test playing)
