---

i need help

about 1 in every 4 times i get on renegade, i get this error:

i start the first decade, choose renegade, click on renegade in the rengaurd window. it starts, i go to INTERNET, wol, and try to sign in. it then crashes back to desktop, and rengaurd will say "unauthorized renegade instance terminated" can anyone help?

more info: it is quite random as far as i can tell, there is no set time, pattern, date, or anything.

when i got to start renegade again it occasionally does it again, but its very rare for it to do it twice in a row, and its never done it three times in a row. if any more detail is needed, ill be glad to give it.
