IronWarrior wrote on Thu, 13 September 2007 17:35Was looking up cards on ebay.uk and found this.

http://cgi.ebay.co.uk/nVidia-GeForce-8400GS-PCI-E-256MB-Graphics-Video-Card_W0QQitemZ140155269959QQihZ004QQcategoryZ3762QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

I'll like it because, it's very cheap, retail price is like 150-200 quid I'll believe?, it's dx10 and supports shader model 4.

Not sure if I'll would ever buy it though, I'll don't fully trust ebay and how can they sell it so cheap? That would put you back around 70-100 euros so about 45 to 65 pounds. It is a real piece of shit though, if you look at the reviews.

Oh, apparently I was wrong it's even cheaper.

Edit:

I'll post something about my gfx card too

I got a Geforce 7800 GTX, for about 2 years now, got it when it was just released. Still does it's job quite nicely. Though I can't run everything at max detail at 1680*1050 anymore, but that was to be expected.
