Saw a PC at best buy today, full sized tower, sexy black finish, 400 dollars for

amd duel core x2 4800+
2gig ddr2 ram
500gig hard drive
nvidia crappy 6150 built in

it has pci express 16x slots, so you can upgrade for 100-200 dollars and make a mini gamer PC, small price, but will play all games at high/max settings. I would upgrade the graphics with a cheap card like the nvidia 7600 512mb or 7950gt the 7600 is now like 100 dollars or less onsale, so you could make a good PC for 500-600 bucks.
