Eh craps i reinstalled my comp, reinstalled renegade, then reinstalled renguard, this time the corepatch auto-downloaded with my renguard (last time it didn't)... My game crashes, froze, quits by itself AGAIN right after i got renguard with corepatch 2.... Before I reinstall renguard it didn't quit by itself at all... so can anyone tell me what's the name of the core patch update files? (like __.dll or something like that) I wanna keep RenGuard and the Renegade itself, I just wanna get rid of the core patch that's been a pain in my arse when playin renegade with it.....
