You know whats funny about tiberian sun? It seemed 500x times more advanced in technology than it is in the third tiberium war, then when you look, they werent, the mammoth tank was crap and hecka slow, they had to replace it with the older fashion btu with new technology. They redid the juggernaut to have special powers which in the end did help alot. We have zone troopers now which are as strong as vehicles. And we have sonic emmitters.
