This has nothing to do with renguard or TFD. Your game clearly crashes when you join a server.

It seems like a connection problem to me.

Do you use gamespy or WOL? If you use gamespy, then you may want to try WOL and check if it does the same (and vice versa).

Do you have a firewall that may block the connection to the renegade server? Are you on an university network or something like that? Sometimes those block gaming traffic.
