Well i am sure that is true, i look forwards to it!

but there is a problem, when i load it it comes up with this, amongst maybe a few other messages of that nature, please i have looked forwards in a sense to getting this program so i can edit/ maybr create my own maps in the future when im good at it...but if there continues to be these kinds of probs with the program ill have to abandon it

So take a close look at the SS below and please explain what is wrong and how to fix it..thnx guys
