Well I don't actually know if I'll be getting one. Hopeing i can make try and get one for Christmas or Graduation from high school from parents... But anyways, I know a few things but there are some parts I'm not sure. The two main ones I can think of now are how do I know what kind of power supply to get and what motherboard. I'm thinking I'll probably try and get an AMD Dual core at 3.0 GHz, 2 gigs of ram, and probably two 512mb video cards.

But this likely won't be for awhile and maybe even better stuff will be out by then, but anyways, would like some input.
