I have a newer laptop with Vista and I can't get the game to come up at all. All I get it the initial Renegade banner box thing right before it starts and then it says Renegade had a problem and closed it. I realize this topic has been posted, and I have read and several of the things suggested like updating, installing Renguard, updating the core/scripts or whatever else, and running it as an administrator. I've also given the program full permission to do whatever it wanted.

I've read something about making the xp sp2 compatable. Honestly, I have no idea what that means and I think it's pretty much the only thing I haven't tried. Would anyone care to explain to me? I'm not computer savy.
