danpaul88 wrote on Sun, 07 October 2007 15:30 Why not just register the channel and give the people auto-op / hop / voice status? It's built right into IRC...

```
/cs register <#channel> <password> <description>
```

```
/cs aop <#channel> add <person>
```

Because chanserv can only set one person +q unless you use access. which is what he should use

```
/cs access (channel) add (person) (level)
```
