I have searched the forums for answers but i need direct help from ppl.

I have a brand new laptop with vista . i installed renegade from TFD on to my laptop. I can start everything up except for WOL when i click on WOL i get the incompatibility message . I have not downloaded any renguard on this computer yet either ,or corepatches. Just installed the game ONLY.

I read other threads and not sure what i should do exactly to make this work for online play. If you can give me the exact steps to folo that would be grand!
