Well all I can say is rename that file. You will get many more people visiting your server I guarantee it. Deleting the file is 100% safe and will not mess up your multiplayer game on normal maps. It will just disable the base defences.

Scripts.dll = Contains the scripts that make base defences work and also all of the Singleplayer mode scripts.

Scripts2.dll = Written by Jonathan Wilson (Renegade Community Member) that includes the scripts for Reborn, Ren Alert and other scripts written by NameHunter, Jon Wilson & Dante.

It will not have any affect on the functionality of the multiplayer game apart from disabling base defences. I know DLL Files may sound scary but it is safe to rename them. You are not deleting them just renaming them so that they are called something else.
