And how many accidents before you press the right damned key?

Well before I changed it, I used to get it constantly.

I didn't realize that it was because of the Scripts and the BHS.dll that I had downloaded. The reason why I had these problems was because my controls are unique, I don't use the default.

But now that I know what the cause of the problem was, I have fixed it, and those new Bhs.dll options in the menu make it much easier to do now.
