How would I go about turning on Autoplay for my disk drive? VMWare disabled it so it doesn't cock up anything, And I clicked okay.

But the thing is.. Red Alert 2 keeps crashing my system because of it (When the disk is in the drive) And I can't seem to turn it on. :\

I have right clicked my E: drive and fiddled about with some options, But there isn't anything available for executable files, So I was wondering if there are any advanced options I could use?
