Dutch Neon wrote on Tue, 23 October 2007 10:00I use a modified file in my windows map (Dunno where) but some Patcher modified a file, so now my XP can run any themes, even fan made, It allows the same stuff as StyleXP, only no 'side-programs' like sidebars and stuff. It's called UXTheme Patch, and I use it too.

Note: It's a violation of your EULA to use the patch, if you're worried about the kinda stuff, then don't install it.
