Subject: Re: Renegade Wont Work!
Posted by Balint on Tue, 23 Oct 2007 08:25:45 GMT

I have a problem with Renegade for ages. It beguns at my Celeron 1300/ GF4 system. Under WinXP.

The game crashes after the intro video, and drops me back to the desktop, and writes a failure message. I can't reach the main menu. I've changed my configuration, but the problem remained. My original First Decade Renegade makes also that. What is the problem?
