Well I have a GeForce 8600GTS 256mb and this game killed it. I could even play Bioshock on full everything but this game is insain! I was forced down to medium and no aa at all.

EDIT: @Anyone

Windows XP Professional wSP2 32-bit

GeForce 8600GTS 256mb

Core 2 DUO 2.33Ghz

4gb RAM

If your computer is any less than that you will likely not be able to play this game unless its at the lowest setting.

Can't expect to run everything on high level.

Am getting an XFX 8600 but with 512mb memory soon, which should allow me to play this game and every other new game coming out on a reasonable level.
