Quote:i put it all into my older case with 400w psu and 2 side fans already on it.

Specifications of the Powersupply?.

Run a program like Orthos. It doesn't stress your video card, but it does stress the PC in overall. If a component is malfunctioning then it should give a error soon.

<http://sp2004.fre3.com/beta/beta2.htm>

So pretty much, monitor the PC while running Orthos.

With program's like speedfan, see if anything occurs. Also turn off restart after bluescreen (advanced system properties) write down the error code.
