Everytime I go into a online game a message pops up saying CD authentication failed. Please quit. Then the game starts working and i can play for about thirty seconds but then it kicks me out. Every game this happens and in the game while im playing no doors will open or I cant have any activity with anything else. Is there a patch I need? The last one i got was the 37 one and Ive heard thats the latest one. So what am i doing wrong?
