cmatt42 wrote on Fri, 16 November 2007 03:28If you want performance, put the gigabit machines higher in the chain, and the 100Mpbs/wireless connections as the secondary connections.

Besides, you probably wouldn't notice the difference anyway. Even with several transfers running at once, I've never even used half of the bandwidth on my 100Mbps.

Even with a three player LAN game, two of the players listening to music and some file transfers on top?
