2007 06:10Its still not working i cant get renegade to load.

Is there another way to change anti aliasing and vsync? cos i cant change it back through renegade

Maybe someone could upload their bhs.dll with default settings so i could try to put that one in my folder and see if it works?

I already got it fixed by installing older version 2.9.2 it works again.

But now there is no way to get my fps higher then 60? cos i cant put off vsync??

Putting off vsync is useless anyway. Your screen can't process more FPS than its refresh rate.

Putting vsyn off doesn't give you any advantage.

Are you sure about that? cos i have heard that people have fps like 150 and only have a monitor with a refresh rate of 60... :SThe 90 spare isn't shown.
