Hmm WAIT, he is hacking, check his ammo. You don't reload that fast normally.
And the water disabling could be considered cheating too.
But he has instant reload hack or something like that. Not sure what he did, but it is something that prevents his ammoclip to go lower then 3

Stop the cheating paranoia EWD, it's annoying.

I take it you don't use scripts.dll, and play on sniper servers?

scripts.dll has a some weird command to make the walls on the tunnels to disappear, And some servers use a modified objects.gm so you never have to reload (Sniper only servers).

Gee wiz you guys, I thought you people played this game?

scripts.dll ? This command already has been there when Renegade came out, and it was never considered as cheating.
