yea I have noticed that too, yesterday I try and join a bunch of servers and just get kicked with no error message from rg(not quite sure if that is actually rg though) and of course getting the "unauthorized instance" thing like everyone does I'm sure

Quote:When I click quit, and try to connect again, Renguard does not come up.

that simply could happen if you already have it started make sure it is not active in the task bar and also make sure it is not running in the processes tab(in task manager) RG is game.exe I think?
