Sorry for the double post guys. But Thanks for the helpful tips about BRenbot.

I now have BRenbot setup and talking with my IRC server. Everything seemed to be working well. But when I open up my FDS exe to make a server I get what you see in the screen shot.

Dose anyone know what this means? It works fine without BRenbot. In fact I actually copied my entire Renegade FDS folder before installing BRenbot in case something went wrong, and when I replace it with the backup of before Brenbot it has no trouble making the server. So is BRenbot not talking to my FDS?

Keep in mind that I am running the Co-op Beta 2.25, so I don't know if that has anything to do with it.

Thanks again
