I didn't realise how powerful XCC was. I spent half hour searching for a batch DDS to TGA converter. Then I went into XCC and you can select all the DDS files and copy to TGA in a matter of seconds. There are a lot of textures in the always.dat not in the FTP textures pack. It's more powerful than it is advertised.

I have that 30MB of cut files from the always.dat with the beta version of the game. It seemed to dissappeared from Renevo. If anyone has a host with unlimited or a few GB of bandwidth I'll upload it because I know a few people have been wanting it. It contains mainly sounds and a few textures.
