I got 3 questions

I use the w3d plugin for RenX. Whenever i import a w3d object/vehicle whatever, it looks green/red/blue etc. in RenX.

1 : Is it normal a w3dfile has all the colors of the rainbow in Renx?

Then I save it.

2 : Does it have to be saved like on my ss?

When i want to play when i am at my HummVee that i saved I dont see any action (can't aim it) in the vehicle.

3 : How is it possible the hummvee isnt working properly?

Please,, someone help me, or a link for a tutorial that explains this
