---

I bought a new comuter and downloaded renguard from this website and when the game loads it says that no WOL name came be found - i cant see how to log in although i have been playin this for ages. It says its downloading core patch 2 then the following text appears:

[B][B]"RenGuard has detected corrupt files. In order to install Core patch 2, you need to download fixed copies and extract them to your renegade directory. Mix files (maps) belong to the data directory.

Click on those download links, unzip the files and put their contents in your Renegade/data directory to overwrite your files that do not match our expected profile, and when you are done restart RenGuard."

There is a link to "scripts" which when clicked it says page cannot be found??

What can i do to fix this???
