Logtar wrote on Wed, 02 January 2008 09:29Well guys, this weekend I found the first decade and I am stoked!

I have not been able to install it yet, family in town that I have to entertain but I figure before the week is over I should be playing.

My main machine is pretty decent for this game as far as hardware I think, I built it a couple of years ago

AMD 2500/333 ATHLON XP 1.8
MB nForce2|5P1A4D NF7-S V2 ABIT ATX
DDRAM 1GB|64X64 PC-3200B CRUCIAL
PWRCLR|RADEON9600PRO 128M 8X

The Linux box I have won't be as beefy but I might try 56 different ways to make it push some more FPS if I have the time so I have have a couple of machines here at home that run it.

Other than that, I am happy that there is a community for the game that is still alive, and I will check the other FREE and MOD games.

That system will be able to run it with ease on a Windows based platform, don't know about Linux but keep us informed.
