Hi, I have just installed Linux Ubuntu on a spare PC I have, it has all the drivers and everything necessary to make it work. Inside, I have a PCI WLAN card, when I try to connect to my wireless network (using Wicd Manager) it stops at retrieving the IP address, my router was set by the factory to use a non-static IP, but obviously using the home network of 192.168.xxx.xxx. The WEP key I entered in is the proper one, so it's a little confusing as to why it won't connect. Does anyone know why?

Thanks in advance.
