And for a nuke for destroy the world, I doubt that too, just impossible. Real time travel...it already happened, you cant change the past.
The USA has about 22000 Nukes, and you think that is not enough to destroy the Earth?
I think that is pretty easy, if you use them to cause as much damage as possible...
To eradicate life? Yes, more than enough.

To destroy the Earth? Not even close.
Depends on what you call destroying the earth ofcourse...
Eradicating all live on earth is pretty much destroying it, don't you think?
You would end up with Mars 2 then.

Actually wiping it away would perhaps be possible by detonating enough bombs near weak spots of the earth, but that would still be difficult...
