For a mod I have in mind, I need the gmax file for the ramjet rifle. Why? To apply silly textures and effects to it in order to turn it into a golden gun. Sort of... An attempt...

So yeah, I managed to import it and texture it (disregard the visible bones). But the problem is that all the animations get messed up. I simply don't know which part of the gun to link to what; I can't rig it. Recoil animations for example totally mess up.

Who can help me out? In other words, who is willing to rig it for me? When it's done I would be happy to make it public, including textures etc.
