1. Make the fore grip more curved. (Give it a "U" shape.)
 2. Instead of making all of the gun out of many different shapes, try to use extrude when and where ever possible.
 3. The top of the gun (the main part, the black area) should be rounded.
 4. Make the pistol grip more curved.
 5. The trigger gaurd should be rectangular, not flat.
 6. You're missing the iron sights.
 7. On the barrel, where it goes from narrow, to wider, and back to narrow at the end: That wider part should be alot shorter.
 8. The butt stock needs to be more curved.
