Hi, I'm new here, and I downloaded almost everything to start modding from renhelp.net, I can install everything, except the RenegadeToolsinstaller2.

I get this message: "could not initialize installation. File size expected: 24830329, size returned=195640.De paramater is onjuist"

"De paramater is onjuist" means the Paramater is wrong or something (that's becuasen i'm dutch and my pc's lanuage is set to Dutch )

Can someone please tell me what's wrong? and where the problem lies. Check the attachement for the file
