Expert was host one when the alpha was released privately to the server owners. There details where:

Quote:The server channel is #mt0wn3 on irc.mtown-zone.com

The host name is a0000000w and the name of the server is "Hunt The Player Mod ::mt0wn.com". And there website is www.mt0wn.com

I don't know if he still has it up, or if he has upgraded the server to this release or not.
I might host it myself and see if there is any interest.
