Well I have Opera, Firefox, and IE. I mostly use Opera. Maybe I'll completly uninstall IE. And I have spybot. I always keep the immunization pretty up to date. I haven't scanned with it yet tho so I'll go ahead and do that.

Edit: I just remembered, I also have goback from my school installing it onto our computers... If i reverted back to a previous time before it, that could get rid of it, right?
