It's not just programs that take up ram, or page file, it's processes too.
Ctrl + Alt + Del "Processes" then take a look. You'll be amazed at the amount of ram some things need. My version of XP usually uses 512mb of RAM on its own, never mind other things. Like dan said, you should go to 98 or 2000. But your processor, being a P4, means the motherboard should be fairly decent, so you could cheaply upgrade it.
