I was reading one of the reviews on a power supply and it said that the 12v were only good to 19 amp and that higher cards needed more than that. I confirmed that the one I'm looking at http://www.newegg.com/product/product.aspx?item=N82E16817371001 Is 19 amp. So how many would a 8800 GT take?

Here is the current build I'm looking at

Case
http://www.newegg.com/product/product.aspx?item=N82E16811124121

Mobo
http://www.newegg.com/product/product.aspx?item=N82E16813130136

Graphic card
http://www.newegg.com/product/product.aspx?item=N82E16814127329

Processor
http://www.newegg.com/product/product.aspx?item=N82E16819103228

Memory
http://www.newegg.com/product/product.aspx?item=N82E16820227199

Hard drive
http://www.newegg.com/product/product.aspx?item=N82E16822148262

Wireless Card
http://www.newegg.com/product/product.aspx?item=N82E16833127080
