ohmybadl tested the death adder aimbot and found to be really un-effective it only hit the target I made 10% of time. You set the color you want it to shoot witch I set as white, sooo over all it was a complete waste of time.

Dude that thing sucks....

Most people had that aimbot (or click bot if you prefer) years ago.

When you do get in to real fast paced actual action and you are aiming for somert like a persons head you accuracy is something like 2%.

2% I mean come on... even most n00bs can get a better accuarcy than that.
