Blazer wrote on Wed, 05 March 2008 15:35 If there is interest I may offer the "RenAway" script that v00d00 created for me. It's a mirc DLL + script that, whenever you join a renegade server, automatically sets you away on IRC with a message saying what server you are playing in (server name).

maybe i can use also that into my renegade tool scripts....

i'm interested, but i want also v00d00 permission that i can rip his scripts for it...
